

Alexandria MT Community Project Revisions Criteria:

Goal: To assess the quality of the translation efficiently and with minimal effort. We cover the main features of the translations to ensure the highest possible data quality. The revision process will be carried out by selecting **checkboxes** from a dropdown menu in the assigned sheets to verify specific items in the provided translations. Then, if any errors exist in the original translation, provide the corrected version.

Task: Each participant should complete **3,000** unique reviews of sentences translated by other participants.

The evaluation criteria include the following items:

1. Dialectness Level (dialectness column)

Measures how well the translation reflects the **features, vocabulary, and style** of a specific dialect rather than **MSA**. It evaluates how closely the translation resembles **the natural, real-world use** of that dialect.

Score from 0 to 10: Rate from **0** to **10** how the translation is authentic to your country's dialect.

0–2: Wrong dialect/register; mostly **MSA** or another dialect.

3–5: Mixed dialect; multiple lexical giveaways; understandable but inauthentic.

6–7: Generally correct with a few lexical or idiomatic mismatches.

8–9: Natural and city-authentic; minor nitpicks only.

10: Native-like, idiomatic, unmistakably from the target city.

✓ Highly Dialectal Translation

- **English Sentence:** Good morning. My goodness, it is so crowded today! It was never this bad.

- صباح الخير. يا نهار مش فايت، إيه الزحمة الجامدة النهاردة دي! عمرها ما كانت بالمنظر ده.

Score: 9

✗ Less Dialectal Translation

- **English Sentence:** Great work, Omar. The insights are very clear.

- شغل رائع يا عمر. الرؤية واضحة جدا.

Score: 5

2. Gender Accuracy (gender_accuracy column)

Check the **gender direction** of the conversation and ensure that the translation accurately matches the gender specified in the “**Gender Direction**” column. If the translation aligns correctly, **check the box** ✓.

E.g., the translation of the English sentence **"I am waiting for you"** to Egyptian dialect is:

Male → Male: أنا مستنيك ✓
 Male → Female: أنا مستنيكي ✓
 Female → Male: أنا مستنيك ✓
 Female → Female: أنا مستنيكي ✓
 Female → Female: أنا مستنيك ✗
 Female → Male: أنا مستنيكي ✗

The initial cost estimates are coming in higher than the client's budget. I think it would be productive to schedule a value engineering session.	تقديرات التكلفة الأولية جاي أعلى من ميزانية ديال العميل. كلفن غادي يكون مفيد نورو اجتماع هندسة القيمة.	male -> female	7	☒	☐	10	10	☐	تقديرات التكلفة الأولية جاي أعلى من ميزانية ديال العميل. كلفن غادي يكون مفيد نورو اجتماع هندسة القيمة.
I agree. I'd rather we make smart choices now than cut corners later. Do you have specific areas in mind?	موافق. كتفضل نختار ذكاء دابا على ما نقصو الجودة من بعد. واثن عندك شي مجالات فبالك؟	female -> male	7	☐	☐	10	10	☐	موافقة. كتفضل نختار ذكاء دابا على ما نقصو الجودة من بعد. واثن عندك شي مجالات فبالك؟

3. Gender Flipped (gender_flipped column)

- ☒ Check the box when the gendered language used in the text (the English one) directly **contradicts** the metadata in the **conversation_direction** column. This indicates an error in the provided metadata. Just check the box and we will fix this issue on our side.

For example, if the source text is:

"Sir, just to be sure, have you tried restarting your router?"

And the **conversation_direction** is listed as **male -> female** (a male speaking to a female), you should check **the gender flipped box**. The text explicitly addresses a male ("Sir"), which conflicts with the "female" listener specified in the direction.

Karim, I've reviewed your group's project draft. You seem to have missed a key part of the instructions.	كريم، انا شفت مسودة مشروعةن. هيتكنك نسيوتوا جزء اساسي من التعليمات.	male -> female	9	☒	☒	10
Oh? Which part, Miss?	وه، اي جزء مس؟	female -> male	10	☒	☒	10
The assignment required a comparative analysis, but your project is purely descriptive. You need to revise it to include the comparison points we discussed in class.	بالوظيفة مطلوب تحليل مقارنة، بس مشروعةن وصفي بس. لازم تعدلوه وتضيفوا نقاط المقارنة اللي حكينا عنها بالصف.	male -> female	6	☒	☒	10
Okay, I see now. We will work on adding that section. Thank you.	يكي، هلق فهمت. رح نشغل على زيادة هالقسم. شكراً لك.	female -> male	8	☒	☒	10

4. Register Appropriateness (register_accuracy column)

Register means the level of formality in a text, which can be higher or lower than what is appropriate based on the specifications or general language conventions. So check the translation domain to make sure the **register** is appropriate for the scenario (e.g., government office, customer support, or friends chatting).

Score from 0 to 10:

- 0–2:** Completely off (e.g., slang in official context).
- 3–5:** Mixed tones; inconsistent honorifics.
- 6–7:** Mostly appropriate; a few mismatches.
- 8–9:** Strong match with consistent markers.
- 10:** Perfectly tuned to context and roles.

5. Faithfulness

Faithfulness measures how accurately the translation conveys the meaning of the source text. A faithful translation captures all the original information **without adding, omitting, or distorting it**. The goal is to preserve the message, not necessarily the exact words or sentence structure.

A practical way to check for this, especially for dialectal translations, is to consider **back-translation (i.e., by translating the text that has already been translated back into the original language)**. Ask yourself: "If this translation were translated back to English by a fluent speaker, would it accurately convey the original message?" A highly faithful translation is one where the meaning is preserved in both directions.

Score from 0 to 10:

- 0–2:** Major meaning errors; misleading.
- 3–5:** Several omissions/additions/mistranslations; halting.
- 6–7:** Minor inaccuracies; overall understandable.
- 8–9:** Accurate and fluent with minor edits.
- 10:** Precise, idiomatic, publication-ready.

Example 1:

English sentence: Definitely keep them in your hand luggage. It's also a good idea to carry a letter from your doctor listing your medications.

Dialectal translation: خليهم باليدوية. وكمان خذ ورقة من الدكتور بأسمائهم. ❌

Score: 3

Reason: The translation is incorrect for **three main reasons**:

- **First**, "باليدوية" does not mean "hand luggage"; it's an adjective meaning "manual."
- **Second**, the command "كمان خذ" (also take) misses the gentle, advisory tone of "It's also a good idea."

- **Finally**, the phrase "بأسمائهم" (with their names) is an oversimplification of "listing your medications," which is more accurately translated as "فيها قائمة بأدويةك" (containing a list of your medications) to convey the idea of a formal list.

Example 2:

English sentence: It's always weak on this side of the library. Try reconnecting, sometimes that helps.

Dialectal translation: دائما كنت ضعيف بهذا الجزء من المكتبة. حاولي تكتين مرة لخ, مرات هلشي ينجح. ❌

Score: 6

Reason: The word "كنت" is not available in the original sentence.

Example 3:

English sentence: Definitely keep them in your hand luggage. It's also a good idea to carry a letter from your doctor listing your medications.

Dialectal translation: خليه معك بالشنطة اليدوية. وبرزه منيح تاخذ ورقة من الدكتور فيها أسماء الأدوية. ✅

Score: 9

Reason:

All propositions present?

- keep them + hand luggage ✅
- carry a letter + doctor + listing medications ✅

No extra info added? ✅

Tone preserved (advice vs command)? ✅

Mapping is one English turn → one Arabic turn (regardless of sentence count)? ✅

6. NEs, CS, Numbers & Units (numbers_CS column)

- This assesses how well factual data like **named entities (NE)** (names of people, places, organizations), numbers, and units (**dates, currencies, measurements**) are

translated. The translation must maintain perfect factual accuracy by transferring the original data without error.

- For the numbers and digits, their presentation should follow local formatting conventions typical for the target audience. **Numbers should be written in letters as mentioned in the translation guidelines.**
- This also includes the proper use of **code-switching (CS)**. Many proper names, especially brands or products (e.g., "Facebook", "AirPods"), should remain in their original language if that is how a local would refer to them. The key is to reflect natural, real-world usage.
- Finally, the chosen format and treatment for each entity must be applied consistently throughout the entire text.

☒ Check this box if all these mentioned points are met.

7. Corrected Translation

Please provide the final translation here based on the following rules:

- **If the original translation is accurate, copy it here without changes.**
- If it contains errors, provide the corrected version (including punctuation, typos ...).
- If the translation uses a specific regional dialect other than yours, only correct typos, punctuation, and minor details. **Do not alter the dialect's unique phrasing or vocabulary.**

8. Overall Decision

Accept as-is, Minor Edit applied (Corrected Translation filled), Major Issue (Explain in notes).

9. Test Set Eligibility

A test set is meant to be released as the benchmark dataset for people to evaluate their models on translating between English and dialect.

Check whether this English-Dialect (based on the corrected translation you provided) pair should be listed in the test set of the data.

Score from 0 to 10 :

0–2: Not usable

3–5: Need revisions first.

6–7: Good but with caveats; not test-set.

8–9: Strong candidate.

10: Ideal benchmark item.

10. Notes

Use this column to add any additional notes or remarks you have about this row.
